Remote Hustle Master Operational Database – Project Description

Project Name: RHDC Master Operational Database

Shittu Oluwadamilare Pelumi ID: AD001036

Problem Solved

Remote Hustle currently faces operational challenges including:

- Manual participant tracking and registration
- Messy submission management and delays
- Slow or inconsistent scoring by judges
- Difficulty monitoring stage progress and generating reports
- Lack of immediate analytics and oversight
- These issues slow down operations and reduce efficiency for admins, judges, and support staff.

Target Users

Admins: Manage participants, monitor stages, and generate reports

Judges: Score submissions and track evaluation progress

Support Staff: Monitor activity logs and maintain system integrity

Key Features

Participant Management: Register participants, assign categories and stages, track status

Submissions Tracking: Track all submissions by status (pending/reviewed/scored)

Judge Scoring: Assign scores and add comments for each submission

Stage Progress Monitoring: View participant counts by stage

Analytics & Reports: Leaderboard, average scores, category performance

Audit Logs: Track all critical actions for accountability

Data Integrity & Security: Enforced foreign keys, constraints, and optional role-based access

Tech Stack

Database: PostgreSQL

Hosting: Supabase

Data Modeling: Relational with 8 core tables + views

How Remote Hustle Can Use It

Immediate Use: Add participants, submissions, and evaluations directly via SQL or dashboard

Analytics & Reporting: Views and queries provide real-time leaderboard and category performance

Operational Efficiency: Reduces manual tracking, speeds up scoring, and ensures clean data for decision-making

Extensible: Can support new stages, categories, and features as the competition grows

Outcome:

A fully functional, secure, and cloud-hosted database ready for live operations, delivering a practical solution that improves Remote Hustle's workflow and data management.
